7.1 Output Screenshots

The outputs below were produced by running the project on the ServiceNow instance.

Milestone 1 – Spreadsheet

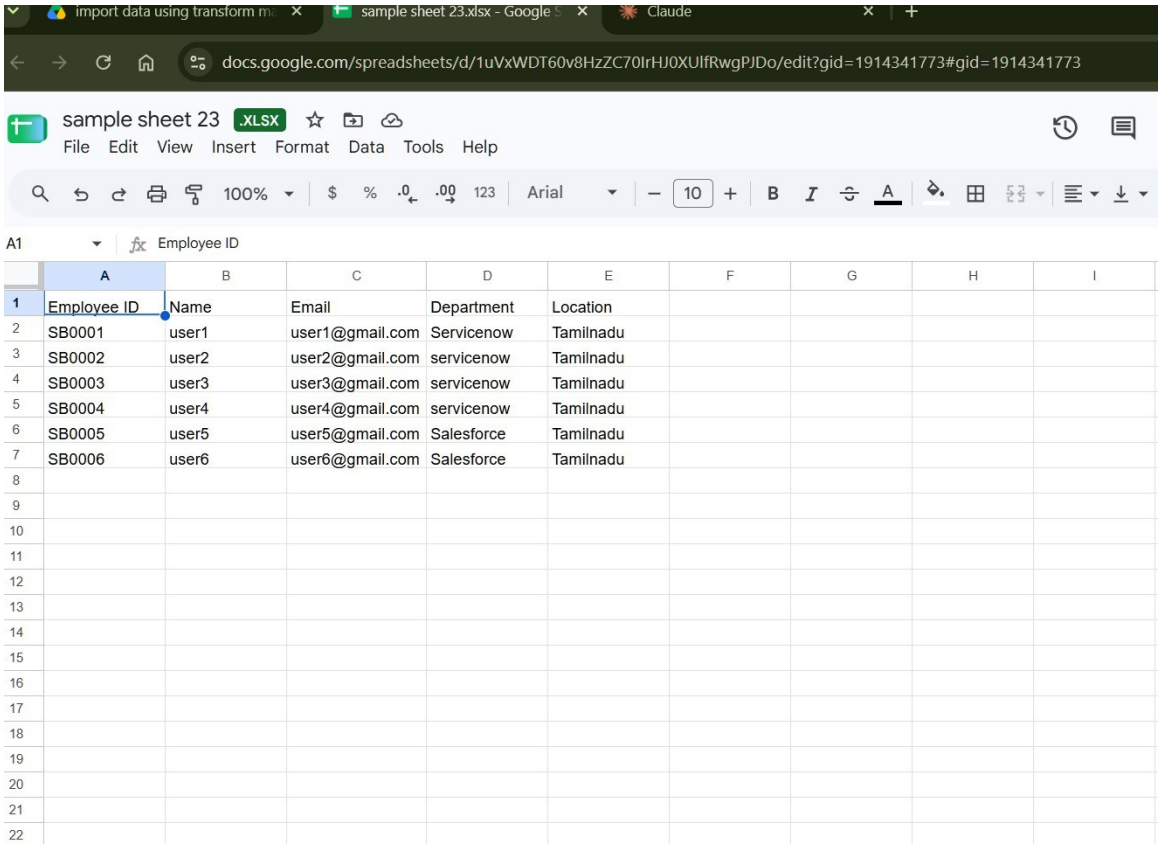

Fig 7.1 Sample spreadsheet with Employee ID, Name, Email, Department and Location columns.

Milestone 2 – Import Set table and Transform Map

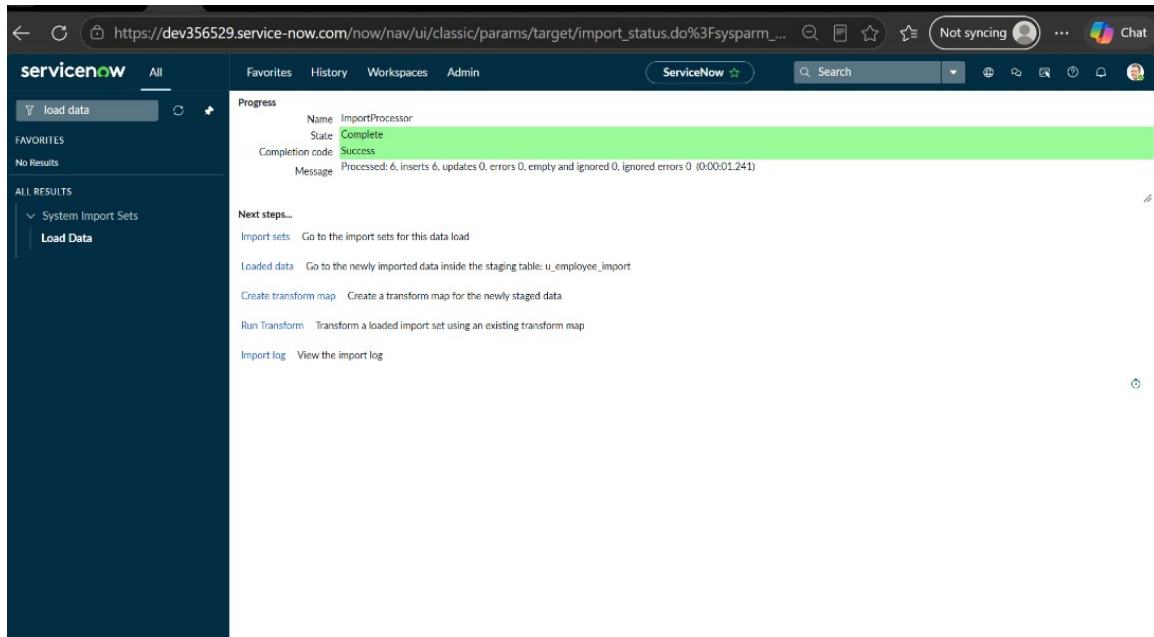

Fig 7.2 Load Data completes with success: 6 records processed and 6 inserted into the staging table.

Fig 7.3 Table Transform Maps list showing Sample Spreadsheet Import from Employee Import to Employee Test.

The screenshot shows the 'Table Transform Map - Sample Spreadsheet Import' configuration page in ServiceNow. The left sidebar contains navigation links for 'System LDAP' and 'Transform Maps'. The main configuration area includes fields for Name, Source table, Target table, and various checkboxes for business rules and coalesce options. Below the configuration fields is a table of field maps.

Source field	Target field	Coalesce
u_email	u_email	false
u_name	u_employee_name	true
u_employee_id	u_employee_id	false

Fig 7.4 Transform map form with source Employee Import, target Employee Test and its field maps.

This screenshot shows the same configuration page as Figure 7.4, but with all five field maps listed in the table. The table includes source fields for email, name, employee ID, department, and location, each mapped to a corresponding target field with a coalesce value.

Source field	Target field	Coalesce
u_email	u_email	false
u_name	u_employee_name	true
u_employee_id	u_employee_id	false
u_department	u_department	false
u_location	u_location	false

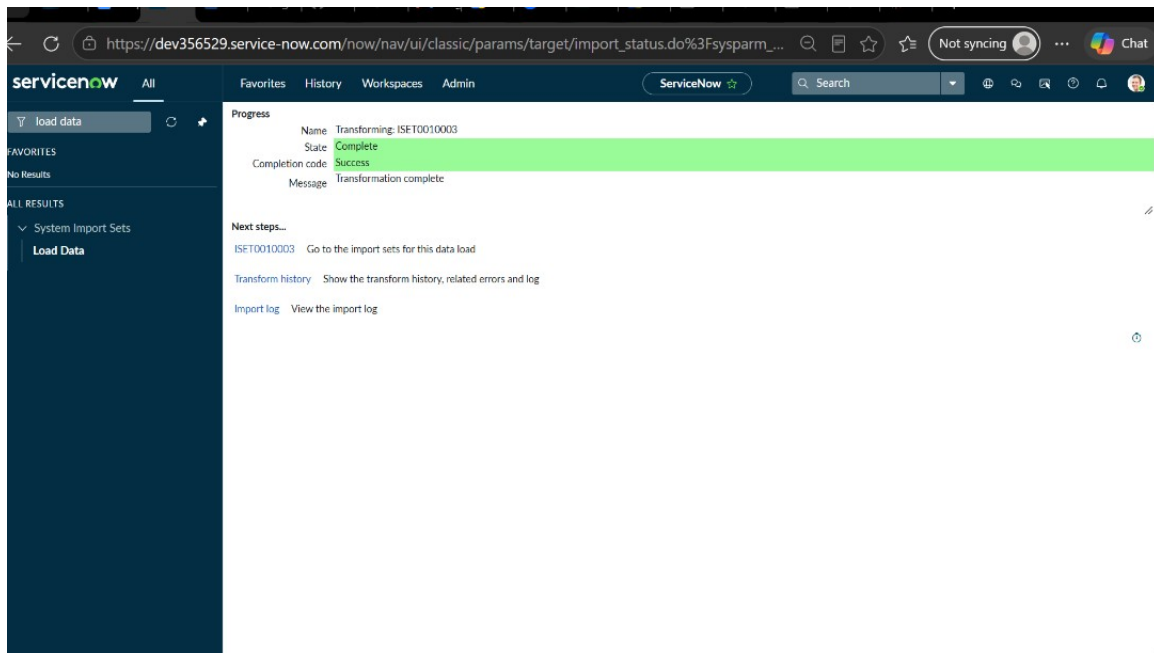

Fig 7.9 Transform completes with state Complete and completion code Success.

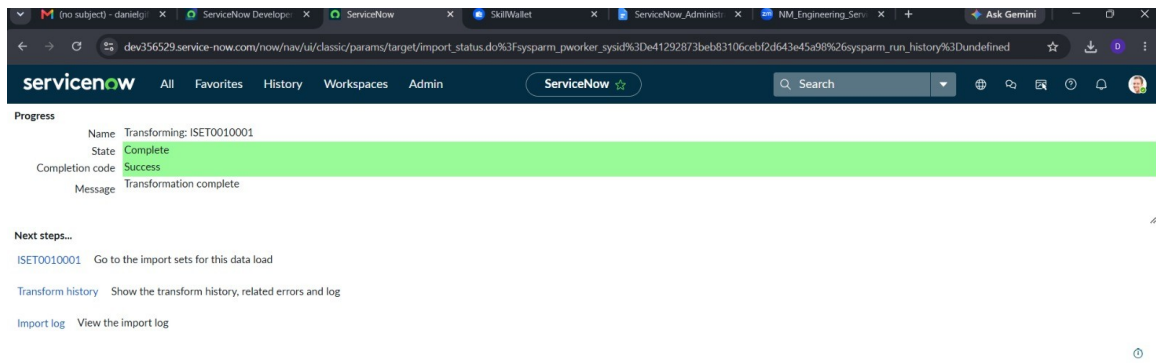

Fig 7.10 First transform of import set ISET0010001 completes successfully.

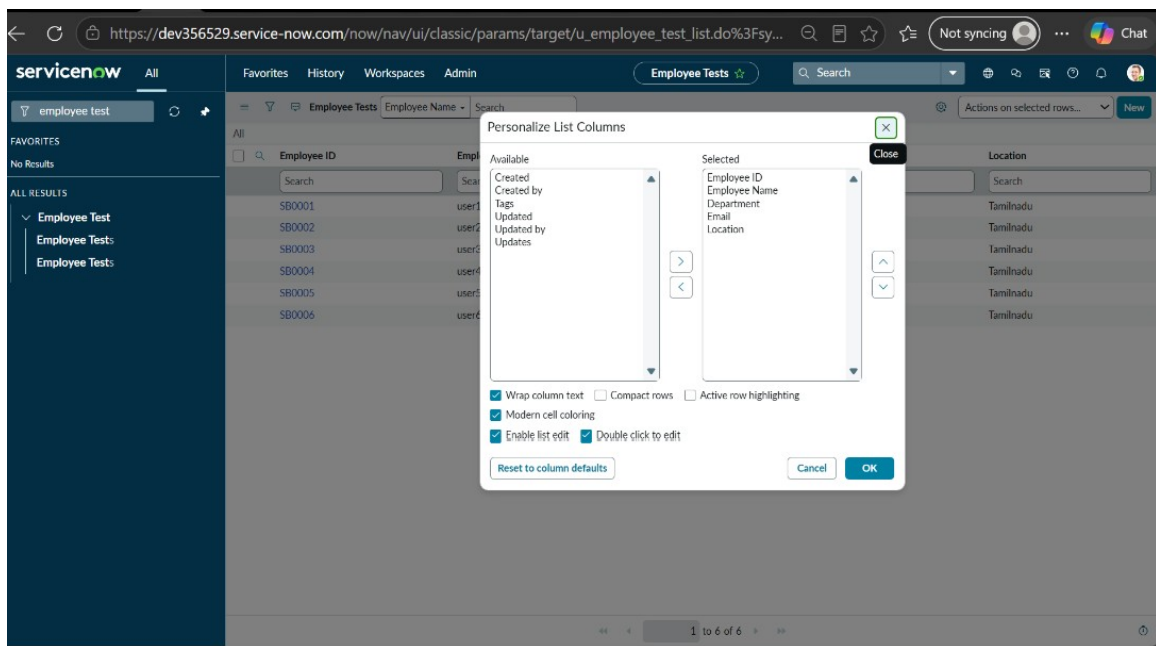

Fig 7.11 Personalize List Columns dialog used to set the column order of the Employee Test list.

The screenshot shows the ServiceNow interface for the 'Employee Tests' list. The table displays five records with columns for Employee ID, Employee Name, Department, Email, and Location. The records are as follows:

Employee ID	Employee Name	Department	Email	Location
SB0002	user2	servicenow	user2@gmail.com	Tamilnadu
SB0005	user5	Salesforce	user5@gmail.com	Tamilnadu
SB0004	user4	servicenow	user4@gmail.com	Tamilnadu
SB0001	user1	servicenow	user1@gmail.com	Tamilnadu
SB0003	user3	servicenow	user3@gmail.com	Tamilnadu

7.2 Result Summary

Check	Result
Staging table created	Employee Import (u_employee_import) created through Load Data
Transform map	Sample Spreadsheet Import: Employee Import → Employee Test; fields auto-mapped
First transform	Success message; all spreadsheet records created in Employee Test
Updated sheet (4 rows)	2 inserted (new Employee IDs) and 2 updated (changed Name / Email)
Same sheet loaded again	0 inserted, 0 updated, 4 ignored – no duplicates
Reports	Employees by Department (pie), Employees by Location, Employee List
Dashboard	Employee Analytics Dashboards shows the three reports

Final result: all records were successfully imported into ServiceNow with Import Set and Transform Map, and repeated imports no longer create duplicate records.
