

10. FUTURE SCOPE

10. FUTURE SCOPE

Date	01 October 2026
Team ID	SWTID-2026-4302
Project Name	Import Data using Transform Maps (Spreadsheet)
Team Members	Prasanna K, Yousuf Riyas S, Ratnakar K S, Mohammed Thoufiq I

10. Future Scope

The current solution is a manual, file-based import. The following enhancements would take it closer to a production-ready data pipeline.

No.	Enhancement	Description
1	Scheduled imports	Replace manual uploads with a Data Source and a Scheduled Import so employee data loads automatically at set times.
2	Validation rules	Add onBefore transform scripts (or field-map rules) to skip or flag rows with a blank or invalid Employee ID, Name or Email – closes test case TC-008.
3	Import activity reports	Report on total, newly added, updated, ignored and error counts from Transform History, and add them to the dashboard.
4	Email notifications	Send an e-mail to the administrator after each import run with the inserted / updated / ignored counts.
5	Reference fields	Map Department and Location to reference fields (Department and Location tables) instead of plain String fields for cleaner reporting.
6	Extend to other tables	Reuse the pattern for users, groups or configuration items.
7	REST / integration sources	Pull data directly from an HR system through REST or JDBC data sources instead of spreadsheets.
8	Larger-volume testing	Complete PT-01 and PT-02 with hundreds or thousands of rows and record run times.
9	Promote with update sets	Build in a development instance and move the tables, transform map and reports to production through update sets.
10	Role-based dashboards	Restrict dashboard and report sharing to HR roles and groups and add more widgets (for example headcount trend).
