

11. APPENDIX

11. APPENDIX

Date	01 October 2026
Team ID	SWTID-2026-4302
Project Name	Import Data using Transform Maps (Spreadsheet)
Team Members	Prasanna K, Yousuf Riyas S, Ratnakar K S, Mohammed Thoufiq I

11.1 Source Code (if any)

The project is delivered by configuration only (tables, transform map, reports, dashboard); **no custom code** was required. The optional script below shows how the validation enhancement listed in Future Scope could be added as an **onBefore transform script** on the Sample Spreadsheet Import map. It is not part of the tested solution.

```
(function runTransformScript(source, map, log, target /*undefined onStart*/ ) {
  // Skip rows that miss a required value (field names assume the auto-created u_
  columns)
  if (!source.u_employee_id || !source.u_employee_name || !source.u_email) {
    ignore = true;
    log.warn("Row skipped - Employee ID, Name and Email are required.");
  }
})(source, map, log, target);
```

11.2 Dataset

Dataset file: **Sample Spreadsheet.xlsx** (Google Sheet exported as .xlsx; Sheet number 1, Header row 1).

Column	Type	Notes
Employee ID	String	Unique key (coalesce field); example ID used in the test: SB-0004
Employee Name	String	Test change: "Ajay kumar" changed to "Ajay"
Email	String	Test change: test10@gmail.com changed to test18@gmail.com (Raviteja)
Department	String	Used for the pie chart report
Location	String	Used for the location report

Update file: a 4-row sheet with 2 existing Employee IDs (changed Name / Email) and 2 new Employee IDs.

Dataset link:

11.3 Configuration Quick Reference

Item	Navigation / value
Create table	Tables > Create New → Label: Employee Test, Name: u_employee_test; add fields via Form Layout

Item	Navigation / value
Staging table	System Import Sets > Load Data → Label: Employee Import, Name: u_employee_import; tick Create Transform Map
Transform map	Name: Sample Spreadsheet Import; Source: Employee Import; Target: Employee Test; Auto Map Matching Fields; Save
Run transform	Load Data > Run Transform (Transform link) > select map > Transform
Coalesce	Transform Maps > Sample Spreadsheet Import > Field Maps > set Coalesce = true on Employee ID
Re-import	Load Data → existing table Employee Import; Source: File; Sheet 1; Header row 1; Submit; Run Transform
Check results	Transform History (counts) and Employee Test list
Reports	All > Reports > New; Source type Table; Table Employee Test; Type Pie; Group by Department; Aggregation Count
Dashboard	PA_DASHBOARDS.FORM (Admin Overrides = true on the pa_dashboards create ACL); name: Employee Analytics Dashboards; add reports with Share > Add to Dashboards

11.4 Glossary

Term	Meaning
Import Set	Staging table that temporarily holds data loaded from an external source
Transform Map	Defines how import set fields are mapped into a target table
Field Map	Mapping of one source field to one target field (can be marked Coalesce)
Coalesce	Use a field as a match key: update the record if it exists, insert if not
Transform History	Log of each transform run with inserted, updated, ignored, skipped and error counts
Sprint / Epic / Story	Fixed work period / large functional area / small task inside an epic
